Part I - Rendering Pipeline

| | |
|---|-----------|
| 1 Introduction | 1 |
| 1.1 Computer Graphics Production | 1 |
| 1.2 Graphics API | 5 |
| 2 Mathematics: Basics | 7 |
| 2.1 Matrices and Vectors | 7 |
| 2.2 Coordinate System and Basis | 9 |
| 2.3 Dot Product | 10 |
| 2.4 Cross Product | 11 |
| 2.5 Line, Ray, and Linear Interpolation | 13 |
| 3 Modeling | 17 |
| 3.1 Polygon Mesh | 17 |
| 3.1.1 Polygon Mesh Creation* | 19 |
| 3.1.2 Polygon Mesh Representation | 23 |
| 3.2 Surface Normals | 24 |
| 3.2.1 Triangle Normals | 24 |
| 3.2.2 Vertex Normals | 25 |
| 3.3 Polygon Mesh Export and Import | 26 |
| 4 Spaces and Transforms | 31 |
| 4.1 2D Transforms and Matrix Representations | 31 |
| 4.1.1 Scaling | 31 |
| 4.1.2 Rotation | 32 |
| 4.1.3 Translation and Homogeneous Coordinates | 33 |
| 4.1.4 Composition of 2D Transforms | 35 |
| 4.2 Affine Transform | 38 |
| 4.3 3D Transforms and Matrix Representations | 39 |
| 4.3.1 Scaling | 39 |
| 4.3.2 Rotation | 40 |
| 4.3.3 Translation and Homogeneous Coordinates | 41 |

| | | |
|----------|---|------------|
| 4.4 | Application: World Transform | 42 |
| 4.5 | Rotation and Object-space Basis | 46 |
| 4.6 | Inverse Transforms | 48 |
| 5 | Vertex Processing | 53 |
| 5.1 | World Transform Revisited | 54 |
| 5.2 | View Transform | 57 |
| 5.2.1 | Camera Space | 57 |
| 5.2.2 | View Matrix for Space Change | 58 |
| 5.3 | Right-hand System versus Left-hand System | 60 |
| 5.4 | Projection Transform | 62 |
| 5.4.1 | View Frustum | 62 |
| 5.4.2 | Projection Matrix and Clip Space | 63 |
| 5.4.3 | Derivation of Projection Matrix* | 67 |
| 6 | OpenGL ES and Shader | 75 |
| 6.1 | OpenGL ES and Shading Language | 75 |
| 6.2 | Vertex Shader | 75 |
| 6.3 | OpenGL ES for Shaders | 77 |
| 6.4 | Attributes and Uniforms | 78 |
| 6.4.1 | Attributes and Buffer Objects | 79 |
| 6.4.2 | Uniforms | 82 |
| 6.5 | Drawcalls | 83 |
| 7 | Rasterizer | 87 |
| 7.1 | Clipping | 87 |
| 7.2 | Perspective Division | 88 |
| 7.3 | Back-face Culling | 89 |
| 7.3.1 | Concept | 90 |
| 7.3.2 | Implementation | 90 |
| 7.4 | Viewport Transform | 92 |
| 7.5 | Scan Conversion | 94 |
| 8 | Image Texturing | 103 |
| 8.1 | Texture Coordinates | 103 |
| 8.2 | Surface Parameterization | 106 |
| 8.3 | Texture Definition in GL | 108 |
| 8.4 | Texture Wrapping | 109 |
| 8.5 | Texture Filtering | 111 |
| 8.5.1 | Magnification | 113 |
| 8.5.2 | Minification | 113 |
| 8.6 | Mipmapping | 114 |
| 8.6.1 | Mipmap Construction | 114 |
| 8.6.2 | Mipmap Filtering | 115 |
| 8.7 | Texture Filtering in GL | 118 |

| | | |
|--------------------------------------|---|------------|
| 8.8 | Mipmapping Examples in GL* | 118 |
| 8.9 | Fragment Shader for Texturing | 121 |
| 9 | Lighting | 127 |
| 9.1 | Phong Lighting Model | 127 |
| 9.1.1 | Diffuse Reflection | 128 |
| 9.1.2 | Specular Reflection | 130 |
| 9.1.3 | Ambient Reflection | 132 |
| 9.1.4 | Emissive Light | 132 |
| 9.2 | Shaders for Phong Lighting | 133 |
| 10 | Output Merger | 139 |
| 10.1 | Z-buffering | 139 |
| 10.2 | Alpha Blending | 142 |
| Part II - Advanced Topics | | |
| 11 | Euler Transforms and Quaternions | 149 |
| 11.1 | Euler Transforms | 149 |
| 11.1.1 | World-space Euler Transforms | 149 |
| 11.1.2 | Object-space Euler Transforms* | 150 |
| 11.2 | Euler Transforms for Keyframe Animation | 153 |
| 11.2.1 | 2D Keyframe Animation | 153 |
| 11.2.2 | 3D Keyframe Animation | 154 |
| 11.2.3 | Interpolation of Euler Angles | 156 |
| 11.3 | Quaternions | 157 |
| 11.3.1 | Quaternion Representation | 158 |
| 11.3.2 | Rotations Using Quaternions | 158 |
| 11.3.3 | Interpolation of Quaternions | 162 |
| 11.3.4 | Conversion between Quaternion and Rotation Matrix | 163 |
| 12 | Screen-space Object Manipulation | 167 |
| 12.1 | Picking an Object | 167 |
| 12.1.1 | Screen-space Ray | 168 |
| 12.1.2 | Camera-space Ray | 168 |
| 12.1.3 | Object-space Ray | 170 |
| 12.1.4 | Intersection between Ray and Bounding Volume | 171 |
| 12.1.5 | Intersection between Ray and Triangle | 175 |
| 12.2 | Rotating an Object | 178 |
| 13 | Character Animation | 185 |
| 13.1 | Skeleton and Space Change | 185 |
| 13.1.1 | Skeleton | 185 |
| 13.1.2 | Space Change between Bones | 186 |

| | | |
|-----------|--|------------|
| 13.1.3 | Character Space to Bone Space | 189 |
| 13.2 | Forward Kinematics | 192 |
| 13.3 | Skinning | 195 |
| 13.3.1 | Vertex Blending | 196 |
| 13.3.2 | Integration with Keyframe Animation* | 198 |
| 13.4 | Inverse Kinematics | 200 |
| 13.4.1 | Analytic Solution | 201 |
| 13.4.2 | Cyclic Coordinate Descent | 202 |
| 14 | Normal Mapping | 209 |
| 14.1 | Height Map | 210 |
| 14.2 | Normal Map | 213 |
| 14.3 | Shaders for Normal Mapping | 214 |
| 14.4 | Tangent-space Normal Mapping | 218 |
| 14.4.1 | Tangent-space Normals | 218 |
| 14.4.2 | Shaders for Tangent-space Normal Mapping | 219 |
| 14.4.3 | Computing Tangent Spaces* | 222 |
| 14.5 | Authoring Normal Maps | 223 |
| 15 | Shadow Mapping | 231 |
| 15.1 | Two-pass Algorithm | 231 |
| 15.2 | Shadow Map Filtering | 234 |
| 15.3 | GL Program and Shaders for Shadow Mapping* | 236 |
| 15.3.1 | First-pass Shaders | 236 |
| 15.3.2 | Render-to-Texture and Framebuffer Object | 238 |
| 15.3.3 | Second-pass Shaders | 239 |
| 15.4 | Hard Shadow versus Soft Shadow | 242 |
| 16 | Texturing toward Global Illumination | 249 |
| 16.1 | Global Illumination | 250 |
| 16.1.1 | Ray Tracing | 250 |
| 16.1.2 | Radiosity* | 254 |
| 16.2 | Light Mapping | 258 |
| 16.3 | Environment Mapping | 259 |
| 16.3.1 | Cube Mapping | 261 |
| 16.3.2 | GL Program and Shaders for Cube Mapping | 262 |
| 16.4 | Ambient Occlusion | 264 |
| 17 | Parametric Curves and Surfaces | 271 |
| 17.1 | Parametric Curves | 271 |
| 17.1.1 | Bézier Curves | 271 |
| 17.1.2 | Hermite Curve and Catmull-Rom Spline | 275 |
| 17.1.3 | Application: Camera Path | 277 |
| 17.2 | Parametric Surfaces | 279 |
| 17.2.1 | Bilinear Patch | 280 |

| | | |
|-----------|-------------------------------------|------------|
| 17.2.2 | Biquadratic Bézier Patch | 282 |
| 17.2.3 | Bicubic Bézier Patch | 286 |
| 17.2.4 | Bézier Triangle | 288 |
| 18 | Surface Tessellation | 295 |
| 18.1 | Displacement Mapping | 295 |
| 18.1.1 | GPU Tessellation | 295 |
| 18.1.2 | Shaders and Tessellator | 297 |
| 18.2 | PN-triangles* | 303 |
| 18.2.1 | Computing Control Points | 303 |
| 18.2.2 | Computing Control Normals | 308 |
| 18.2.3 | GPU Tessellation | 310 |
| 18.2.4 | Shaders and Tessellator | 311 |
| | References | 319 |
| | Index | 321 |

Preface

OpenGL ES is the standard graphics API for mobile and embedded systems. Virtually every pixel on a smartphone’s screen is generated by OpenGL ES. However, there exists no textbook on OpenGL ES which has a balance between theory and practicality. This book is written to answer that need and presents the must-know in real-time graphics with OpenGL ES. This book suits the advanced undergraduate and beginner graduate courses in computer graphics.

Another primary group of readers that this book may benefit includes mobile 3D app developers, who have experiences in OpenGL ES and shader programming but lack theoretical background in 3D graphics. A few excellent programming manuals on OpenGL ES can be found in bookstores, but they do not provide a sufficient level of mathematical background for developers. Assuming that the readers have a minimal understanding of vectors and matrices, this book provides an opportunity to combine their knowledge with the background theory of computer graphics.

This book is built upon the author’s previous work *3D Graphics for Game Programming* published in 2011. Reusing roughly half of the contents from that book, several new topics and a considerable number of OpenGL ES and shader programs have been added. As OpenGL ES is a subset of OpenGL, this book is also suitable for beginner OpenGL programmers.

The organization and presentation of this book have been carefully designed so as to enable the readers to easily understand the key aspects of real-time graphics and OpenGL ES. Over the chapters, numerous 3D illustrations are provided to help the readers effortlessly grasp the complicated topics. An important organizational feature of this book is that “non-core” details are presented in separate notes (in shaded boxes) and in optional sections (marked by asterisks). They can be safely skipped without incurring any difficulty in understanding the subsequent topics of the book.

If the optional parts are excluded, the entire contents of this book can be covered in a 16-week semester for graduate classes. For undergraduate classes, however, this feat will be difficult. According to the author’s experience, teaching Chapters 1 through 14 is a feasible goal.

The sample programs presented in this book are available on GitHub: <https://github.com/medialab-ku/openGLESbook>. The site also provides links to the full-length lecture notes as PowerPoint files and additional materials including video clips.
